

Rethinking People Flow

Guide visitors through the museum, analyze exhibit success and optimize operations

Guide and manage visitor flow supported by live occupancy to enhance visitor experience

Understand and plan the success of exhibitions and campaigns by measuring visitors' journey, focus and demographics

Improve operations by knowing how and when your queues develop

Staff and schedule reception, security and cleaning personnel based on visitor flow to reduce costs and be more efficient

Optimize heating, cooling and lighting costs based on actual usage

Analyze people flow

96 / 120

Guide visitors

Optimize operations

Visitor flow – from basic counts to complete analytics

Beauty is in the eye of the beholder, but so is up to 99.9% accuracy.

Our 3D stereo vision sensors are GDPR compliant, none of what they see is passed along or recorded. No visitor images leave the sensor, only coordinates are viewable as colorful dots – call it a work of art. A masterpiece worth investing in, as they are built for sustainability. They can weather all environments: light or dark, wet or cold. The sensors are also ready for tomorrow with AI-powered applications that help you fathom the finer details of visitor flow.
