**FOR IMMEDIATE RELEASE**

**XOVIS LAUNCHES  
FULLY MANAGED PASSENGER FLOW SERVICE**

**Zollikofen, CH (September 12, 2023)** – Xovis is excited to announce the official release of AERO, the company's new fully managed passenger flow service. The cloud-native solution advances the Passenger Flow Management System (PFMS) that is already being used by over 110 airports globally.

Managed cloud services like AERO fit squarely with sustainability and resource optimization initiatives gaining traction among airports of all sizes in all corners of the globe. We are proud to help terminal operators reach their cost management, staff allocation and passenger experience targets with a cloud-based PFMS that minimizes the need for costly on-premises data centers.

Accuracy, real-time data, quality and know-how developed over a decade working closely with terminal operators helped Xovis maintain a leading position in the aviation industry. AERO builds on the company's reputation for delivering rich, objective data about passenger flows, KPIs that airport managers can use to limit queuing and avoid bottlenecks at airport touchpoints.

"Agility, flexibility and scalability are the characteristics of the passenger experience solutions that will guide the airports of the future. AERO keeps Xovis in the lead on all three," Florian Eggenschwiler, Xovis' Chief Product Officer, said of the product, which is already being deployed in Europe and the Americas.

Discover all the features that make [AERO](#) the preferred passenger flow management solution in an industry migrating to cloud managed services.

**ABOUT XOVIS**

Xovis is a market-leading technology company that develops, produces and distributes 3D sensors and related software solutions for precise counting and analysis of people flow worldwide. Airport terminals, retailers, smart buildings, and public transport operators rely on the company's tailored solutions to optimize resource allocation and expand data capture sources. Simple integration, data protection compliance, high precision, and AI-based features characterize the technology of Xovis. Founded in 2008, Xovis has more than 200,000 sensors

installed globally, employs around 130 people worldwide, and has offices in Boston, USA, and Bern, Switzerland.

Xovis has the technical skill and market experience to deliver a PFMS installation to improve performance at security, check-in, immigration, restrooms, taxi/rideshare, and retail/concession spaces at airports of all sizes. The company works directly with airports to design and implement customized solutions—a one-stop shop that has earned the innovative disruptor a stellar global reputation. Tastefully designed, ceiling-mounted sensors cover large areas without sacrificing precision or running afoul of evolving data privacy rules. Xovis is a market- and technology-leading high-tech company that develops, manufactures and distributes 3D sensors and software solutions for precise counting and analysis of people flows worldwide.
