FOR IMMEDIATE RELEASE

XOVIS ESTABLISHES INDIA OFFICE TO SUPPORT GROWING PORTFOLIO OF AIRPORT CUSTOMERS

BERN, SWITZERLAND (September 1, 2025) – The Xovis Group has established a new subsidiary, Xovis Technologies India Pvt. Ltd., to better support ambitious expansion and modernization campaigns at public and privately owned airports across the country.

The fastest-growing aviation market globally, India is already advancing multiple greenfield and brownfield airport projects designed to help operators improve the passenger experience, reduce excessive wait times, and optimize operations. Accurate, real-time, and privacy-compliant passenger flow data is fundamental to this transformation, which is why Xovis has become a preferred provider of passenger flow management solutions in the country.

“India is one of the world’s most exciting aviation markets. Rapid growth in all passenger categories is driving demand, and at the same time, passengers’ expectations are changing. Accurate, real-time data from Xovis’ solution helps ensure terminal operators in India meet their operational targets while delivering high service levels to passengers. Establishing an office in the country ensures we can meet operators’ expectations,” Christian Studer, Xovis CEO, said.

Xovis has been the passenger flow management partner of choice for Indian airports since at least 2016, when Delhi International Airport Limited (DIAL) started its first rollout. DIAL has continuously expanded its installed base, a testament to its reliability. Since then, six other private and government-owned airport operators have already selected Xovis for both brownfield and greenfield terminals.

Passenger to airports in India regularly see Xovis data prominently displayed on digital signage in terminals, and, behind the scenes, that same data is used by a wide range of internal and external stakeholders.

IN INDIA FOR INDIA

The new company and an expanded India-based workforce demonstrate Xovis’ strong commitment to its growing portfolio of public and privately owned airports in the country. With a local team focused on airport projects, service delivery, and sales, Xovis can offer faster on-site support and immediate project updates. This facilitates better alignment with the needs of partners and customers in India, including those using AERO—Xovis’ fully managed Passenger Flow Management System.

Xovis Technologies India Pvt. Ltd. is the last link in the Xovis Group’s creation of a seamless global support network, which now spans all time zones to serve airport customers in all populated continents.

ABOUT XOVIS

Xovis is a market-leading technology company that develops, manufactures, and sells 3D sensors and related software solutions for the precise counting and analysis of people flows worldwide. More than 120 airports globally rely on Xovis Passenger Flow Management System, and retailers, public transportation operators, and facility managers rely on the company's sensors to optimize resource allocation and expand data collection sources. Easy integration, data privacy compliance, high precision, and AI-based functions characterize Xovis' technology.

Founded in 2008, the Xovis Group has more than 600,000 sensors installed globally, employs 200 people worldwide, and has offices in Boston, USA; Bern, Switzerland; Berlin, Germany; and Gurugram, India.
